Introduction

The Globe Grocery Tracker mobile app provides an easy way for users to help Deakin University Globe Research team to research about population health and obesity trends through participants giving research data, by uploading the images of their grocery receipt and some personal information (e.g. age, height, weight, gender).

How we ensure the security of your data

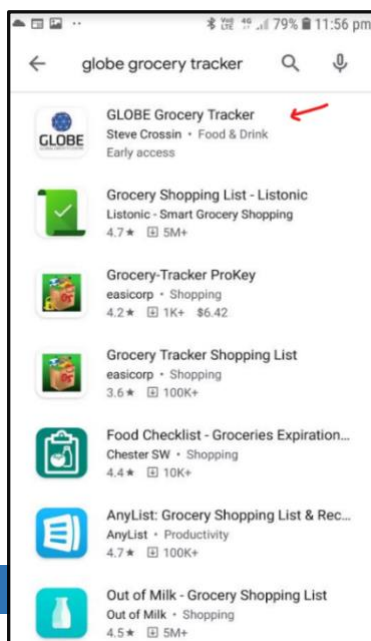

You may want to be sure that your personal data won't get into the wrong hands. We will not disclose any personal information or personally identifiable research information to a third party for a purpose other than conducting our research unless we have your express prior consent or are required to do so by an Australian law or court/tribunal order.

Compatibility

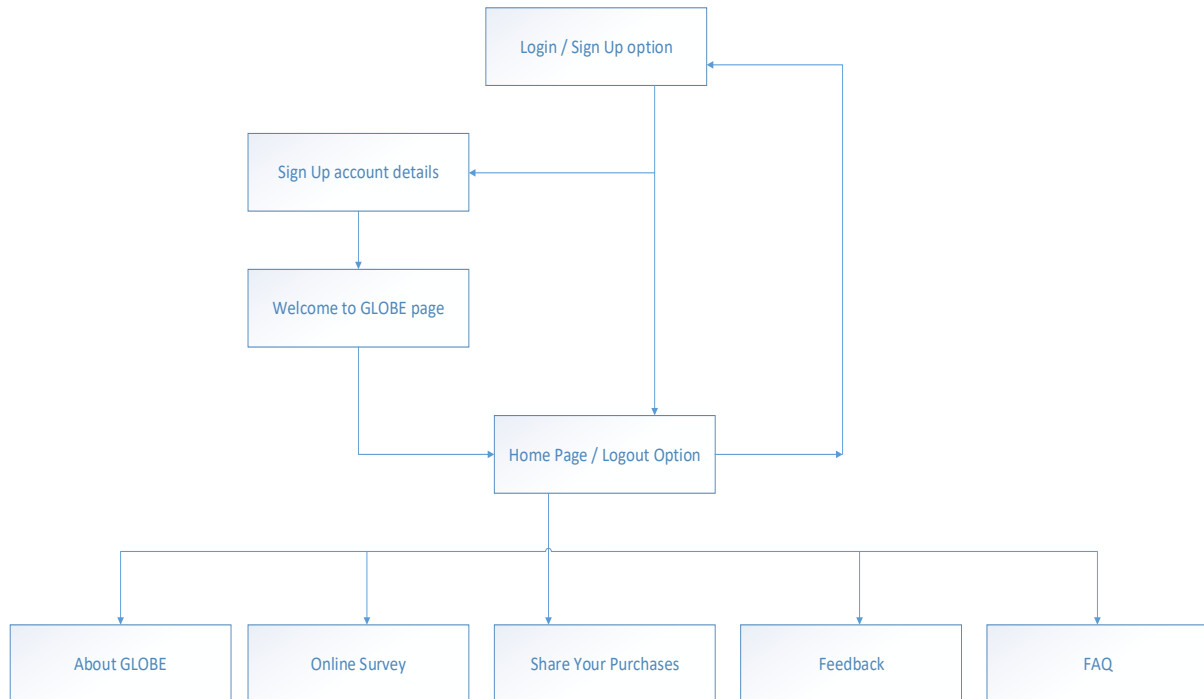

Compatible with all Android Devices.

How to install the App

To find the App manually, navigate to the Google Play Store and search “GLOBE Grocery Tracker”-> Select INSTALL to begin the download.”. Then Please wait while the GLOBE Grocery Tracker Mobile App is being downloaded and installed.

Application Roadmap

Login to App

If you have an account already, signed up for the app

Enter your registered email address and Password, then click on **“Sign In”** to login.

Please refer: **Figure 6: Account Home Menu**

If you are a new user,

Select **“No Account? Sign Up”** for registering as a new user.

Dynamic Notifications

To ensure that users regularly upload their receipts, a dynamic notification feature has been implemented that sends out a reminder notification to a user when they have not uploaded for a certain amount of time. When signing up, the user must provide the frequency in which they shop, with the options being either weekly, fortnightly, or monthly. Once the time since the user last uploaded a receipt has been longer than the shopping frequency they provided, a notification will be sent to the customer reminding them to upload. Manual notifications can also be sent from the Firebase console

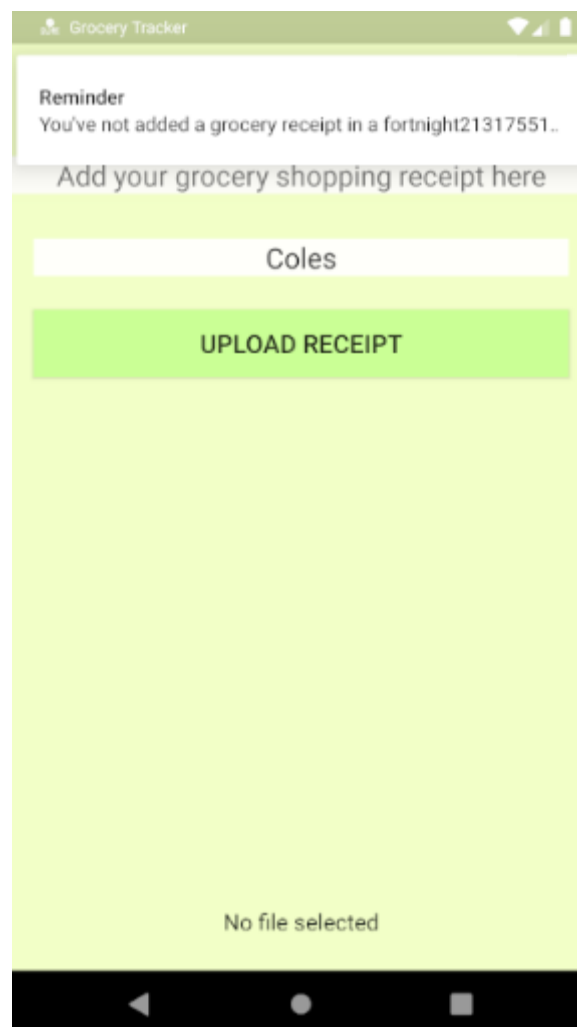

Figure 16: Dynamic Notification example

How to send notifications through Firebase

The Firebase console can be accessed at console.firebase.google.com, where you will be prompted to select the Project you wish to access, assuming you have logged in with login details linked to the relevant project. Once the project has been selected, select the In-App Messaging link in the menu on the left side of the page, shown below. From here, selecting New Campaign (also shown in the image below) presents the user with the different options for the notification, such as the style (photos, links, etc.), target audience and scheduling options. Once all the required options have been selected, pressing Review will finalise the notification so they are ready to be sent.
